

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	1 October 2026
Team ID	SWTID-2026-3453
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. For this project, the brainstorming focuses on practical ideas for importing employee information from a spreadsheet into ServiceNow through Import Sets and Transform Maps, while preserving Employee ID-based record handling.

The ideas below are derived only from the stated project workflow: spreadsheet employee data, temporary Import Set storage and validation, field mapping to the target Employee table, Employee ID as the unique identifier, updating existing employees, and inserting new employees.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm	Before you collaborate	Define your problem statement
Purpose Generate practical ideas that can make the spreadsheet-to-ServiceNow employee import process clear, consistent, and reliable.	Team gathering Discuss the supplied employee fields: Employee ID, Name, Email, Department, and Location. Set the goal Identify ideas that directly support importing, validating, mapping, updating, and inserting employee records. Facilitation focus Stay within the stated project workflow.	Problem statement How might we import employee information from a spreadsheet into ServiceNow using Import Sets and Transform Maps so that the supplied fields are validated and correctly mapped, while Employee ID identifies existing employees for update and new employees for insertion?

Key brainstorming rules for this project	Stay focused on the employee spreadsheet import workflow.	Encourage multiple implementation ideas.	Do not introduce unsupported features.	Build on ideas that improve validation, mapping, and Employee ID-based processing.
---	--	---	---	---

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorm: list practical ideas that directly address the selected problem statement. Group similar ideas so the team can compare them as related solution concepts.

Group	Brainstormed ideas
Data Preparation	1. Use a consistent spreadsheet structure with Employee ID, Name, Email, Department, and Location. 2. Validate that the supplied employee fields are present before transformation.
Import Set Processing	3. Store uploaded spreadsheet rows in the Import Set Table for temporary processing. 4. Use the Import Set stage for data validation before target-table processing.
Transform Mapping	5. Map Employee ID, Name, Email, Department, and Location to corresponding Employee-table fields. 6. Keep the source-to-target field mapping explicit and consistent.
Record Identification	7. Use Employee ID as the unique identifier for matching records. 8. Use the Employee ID match to distinguish existing employees from new employees.
Update / Insert Handling	9. Update the existing Employee record when Employee ID already exists. 10. Insert a new Employee record when the Employee ID does not already exist.

Group Ideas

Cluster	Related focus
Data Preparation	Spreadsheet fields and validation
Import Set Processing	Temporary staging and validation
Transform Mapping	Source-to-target employee field mapping
Record Identification	Employee ID as the unique match key
Update / Insert Handling	Existing-record update versus new-record insertion

Step-3: Idea Prioritization

Prioritize the brainstormed ideas by considering two dimensions: Importance to the stated employee-import problem and Feasibility within the described ServiceNow Import Set and Transform Map workflow.

Importance Higher ↑ Lower			Import Set staging and validation Transform field mapping	Employee ID matching for update/insert
		Department / Location mapping	Spreadsheet field consistency	
Feasibility Lower → Higher				

Priority	Idea	Importance	Feasibility	Reason
1	Employee ID matching for update/insert	High	High	Directly determines whether an existing employee is updated or a new employee is inserted.
2	Import Set staging and validation	High	High	Matches the stated temporary processing and validation stage before target-table processing.
3	Transform field mapping	High	High	Directly connects the spreadsheet employee fields to the corresponding Employee-table fields.
4	Spreadsheet field consistency	Medium-High	High	Supports reliable processing of Employee ID, Name, Email, Department, and Location.
5	Department / Location mapping	Medium	High	Ensures the supplied organizational fields are transferred to their corresponding target fields.
