

Ideation Phase

Define the Problem Statements

Date	1 October 2026
Team ID	SWTID-2026-3453
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand the customer's point of view. For this project, the customer perspective is represented by the ServiceNow user responsible for importing employee information from a spreadsheet into the Employee table.

A well-articulated problem statement helps the team focus on the actual challenges in temporary Import Set processing, data validation, Transform Map field mapping, and Employee ID-based handling of existing and new employee records.

I am	I'm trying to	But	Because	Which makes me feel
a ServiceNow user responsible for importing employee information from a spreadsheet	to load Employee ID, Name, Email, Department, and Location using Import Sets and Transform Maps	the spreadsheet rows must be temporarily processed and validated, and the source fields must be correctly mapped to the target Employee fields	Employee ID is the unique identifier used to identify existing employees for update and new employees for insertion	concerned about employee records being processed incorrectly if validation, mapping, or Employee ID handling is inconsistent

Reference: Customer Problem Statement template structure adapted for this project.

Project-Specific Problem Statement View:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a ServiceNow user responsible for importing employee information from a spreadsheet	load Employee ID, Name, Email, Department, and Location into the Employee table using Import Sets and Transform Maps	the spreadsheet data must first be stored for temporary processing and validation, and the source fields must be correctly mapped to the target Employee fields	the import workflow depends on consistent validation and source-to-target field mapping before employee records are processed	concerned about employee information being processed incorrectly or inconsistently
PS-2	a ServiceNow user processing employee spreadsheet records	handle both existing employees and new employees during the import	the system must use Employee ID as the unique identifier to distinguish records that need to be updated from records that need to be inserted	Employee ID is the defined key for identifying an existing employee record and determining the required record action	concerned about an employee record being updated or inserted incorrectly if the Employee ID is not handled correctly
