

Functional & Performance Testing Template

Import Data using Transform Maps (Spreadsheet)

Model Performance Test

The following tests are adapted from the supplied testing template for the ServiceNow employee spreadsheet import workflow. Actual execution measurements were not supplied, so the Actual Result and Pass/Fail fields are intentionally marked as pending rather than invented.

Date	1 October 2026
Team ID	SWTID-2026-3453
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	As per supplied template

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Spreadsheet Field Validation	Prepare a spreadsheet containing Employee ID, Name, Email, Department, and Location. Include valid and invalid/missing values where applicable.	Required employee fields are accepted when valid; invalid or incomplete source data is identifiable before transformation.	Pending execution	Pending
FT-02	Import Set Processing	Upload the employee spreadsheet and inspect the Import Set Table.	Spreadsheet rows are loaded into the Import Set Table for temporary processing and validation.	Pending execution	Pending
FT-03	Transform Map Field Mapping	Run the Transform Map and inspect the mapped Employee fields.	Employee ID, Name, Email, Department, and Location are mapped to their corresponding target Employee fields.	Pending execution	Pending
FT-04	Employee ID Update / Insert Logic	Process one row with an existing Employee ID and another with a new Employee ID. Inspect the target Employee table.	Existing Employee ID updates the matching record; a new Employee ID creates a new Employee record.	Pending execution	Pending
PT-01	Import Processing Response Time	Use a timer or ServiceNow execution timing information to measure the time required to process the supplied spreadsheet.	Processing completes within an acceptable time for the supplied spreadsheet size without unnecessary delays.	No measurement supplied	Pending
PT-02	Transform Map Processing Speed	Run the Transform Map on the staged employee records and record the transformation duration.	Transform Map processes the staged rows consistently without avoidable processing overhead.	No measurement supplied	Pending
PT-03	Spreadsheet Load / Volume Test	Process a representative larger spreadsheet and observe import and transformation behavior.	The workflow processes the supplied volume without failure or unexpected record-handling behavior.	No measurement supplied	Pending
PT-04	Target Record Verification Time	After transformation, review the Employee table and verify updated and inserted records.	Target records are available for verification after the import process completes.	No measurement supplied	Pending

Performance Test Interpretation

Performance evaluation should be based on the actual ServiceNow instance, spreadsheet size, and execution conditions. This report therefore avoids claiming the 3-second threshold from the generic reference template as a measured result for this project. The relevant checks are processing time, transformation speed, handling of representative spreadsheet volume, and availability of target records after processing.

Overall Test Status: **Pending execution**
