

Project Design Phase

Proposed Solution Template

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

Date	1 October 2026
Team ID	SWTID-2026-3453
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Employee information is maintained in a spreadsheet and must be imported into ServiceNow accurately. The solution must stage and validate the spreadsheet data, map Employee ID, Name, Email, Department, and Location to the target Employee fields, and correctly distinguish existing employees from new employees.
2	Idea / Solution description	Use ServiceNow Import Sets and a Transform Map. The employee spreadsheet is loaded into the Import Set Table for temporary processing and validation. The Transform Map maps the spreadsheet fields to the corresponding Employee fields. Employee ID is used as the unique identifier so matching records are updated and records with new IDs are inserted.
3	Novelty / Uniqueness	The solution combines spreadsheet-based employee data loading with controlled staging, field mapping, and Employee ID-based update/insert handling in one ServiceNow workflow. This reduces the need to manually recreate employee records one by one.
4	Social Impact / Customer Satisfaction	The workflow supports more consistent employee data handling and reduces repetitive manual entry. Users can validate imported data and verify the resulting Employee records, improving confidence in the import process.
5	Business Model (Revenue Model)	The solution itself is an internal ServiceNow data-import workflow rather than a standalone revenue-generating product. In a service implementation context, organizations could use such workflows as part of paid ServiceNow configuration, implementation, or data-migration services.
6	Scalability of the Solution	The workflow can process additional employee rows through the same Import Set and Transform Map process. As spreadsheet volume grows, the same field structure and Employee ID matching logic can be reused without changing the core workflow.
