

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	1 October 2026
Team ID	SWTID-2026-3453
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Spreadsheet Employee Data Input	Use the spreadsheet containing Employee ID, Name, Email, Department, and Location as the source employee data for import.
FR-2	Import Set Processing	Store the uploaded spreadsheet data in the Import Set Table for temporary processing and validation before transformation.
FR-3	Transform Map Field Mapping	Map Employee ID, Name, Email, Department, and Location from the Import Set data to the corresponding fields in the target Employee table.
FR-4	Employee ID-Based Record Handling	Use Employee ID as the unique identifier: update the existing employee record when the ID exists; insert a new employee record when the ID does not exist.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The spreadsheet import workflow should be clear for the user, with understandable source fields and a straightforward Import Set and Transform Map process.

NFR-2	Security	Employee information should be handled within the defined ServiceNow import and target-table workflow, with access controlled by the ServiceNow environment.
NFR-3	Reliability	The import process should consistently validate staged spreadsheet data, apply the defined field mappings, and use Employee ID to determine update or insertion.
NFR-4	Performance	The import workflow should process the supplied spreadsheet data efficiently through the Import Set and Transform Map stages without unnecessary processing.
NFR-5	Availability	The import process should be usable when the required ServiceNow import functionality and target Employee table are available.
NFR-6	Scalability	The defined Import Set and Transform Map workflow should support processing employee records from the spreadsheet without changing the stated data fields or record-handling logic.
